

Sentinel distributor

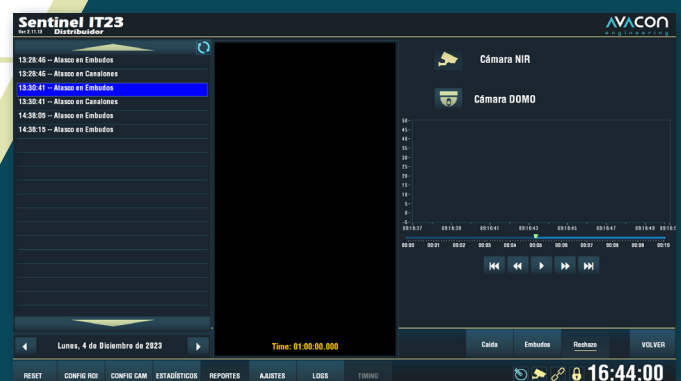

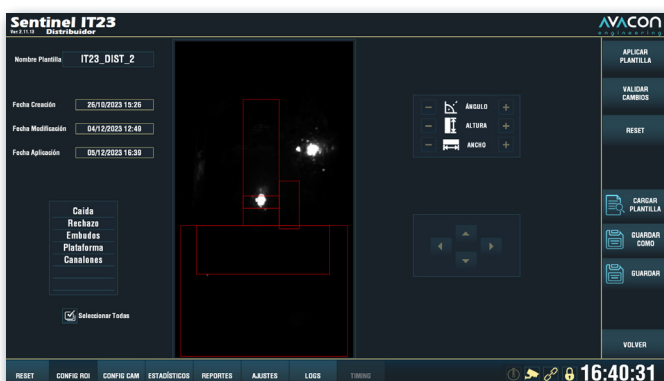

Accurate detection of glass jams and monitoring of the distribution area, through NIR and RGB surveillance.

The distributor area is a critical zone in the machine. This area is neither monitored nor visible from the production area, and any malfunction here can lead to serious issues, such as difficult-to-clear blockages or even fires.

With the combination of NIR and Visible-
RGB Images, the Sentinel-Distributor
achieves precise glass jam detection
and area monitoring, providing
automatic actions such as enabling
alarms, interceptor activation, opening
the cuts or removing the distributor.

- ✓ **SENTINEL surveillance extended to Distributor**
- ✓ **24/7 monitoring for incidence detection**
- ✓ **Instant action on problems**
- ✓ **100% configurable and adaptable to machine conditions**

Simple and accessible INTERFACE

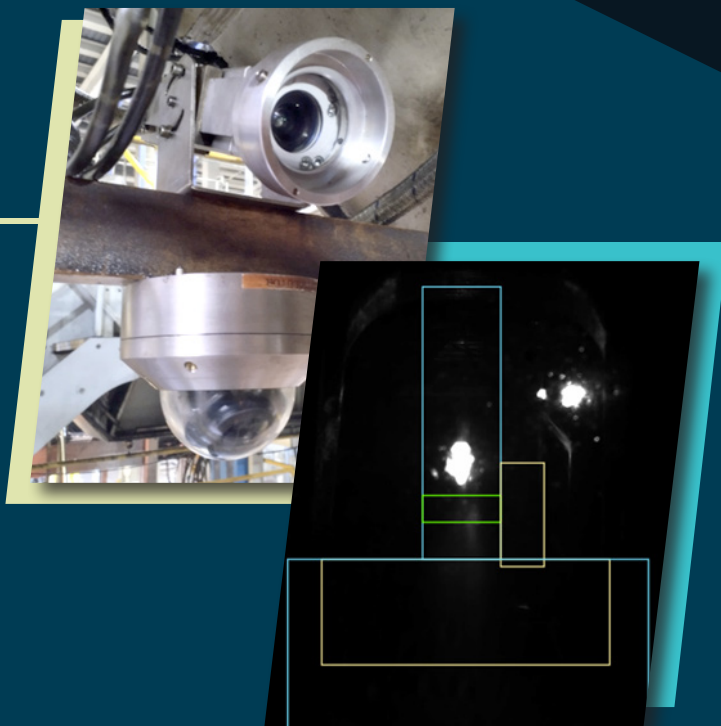

*A monitored distributor is
a safe production.*

Sentinel distributor

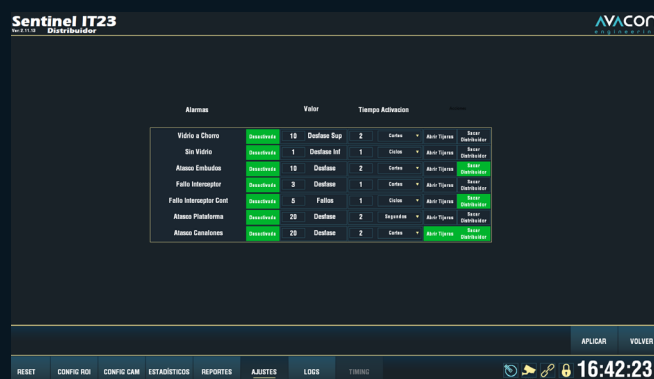

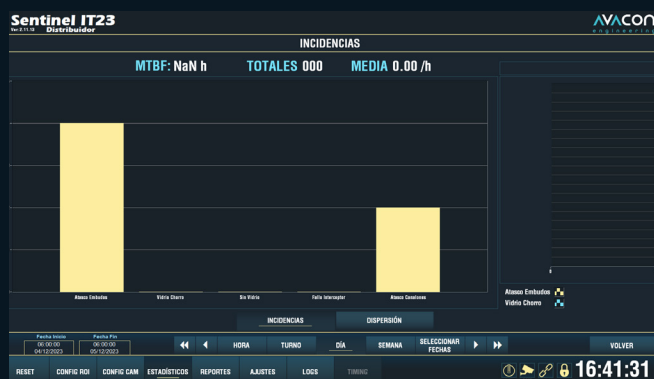

EVENTS reports, logs and statistics

Events detection

- ✓ Glass stream
- ✓ Machine without glass
- ✓ Jams on funnels
- ✓ Jams on foreheads
- ✓ Glass on the platform
- ✓ Gob interceptor failure

EASY configuration

*The success of IS Machine surveillance
extended to the Distributor.*
